WOOD'S HIGH-GRADE GARDEN SEEDS

Planning and Planting a Home Garden

WITH the approach of spring the thoughts of thousands turn again to the great outdoors, seeking some sort of diversion. Gardening is a pastime that will give you joy in abundance and rewards beyond measure. A Home Garden is also a safeguard to your health. It provides wholesome and healthful exercise for the body and mind. It furnishes fresh green vegetables for the table. Young, tender Beets, Peas, Beans, etc., from the home garden have a quality unpurchasable. Later on try some Golden Giant Corn. Eat it within one hour after it has been gathered. There is no comparison between such corn and corn from the store, because it loses fifty per cent of its sugary sweetness after it has been gathered twelve hours.

The preparation of the soil is the first and most important operation. The soil should be dug the depth of a spading fork and broke up thoroughly so that the air and moisture can pass freely through it. Deep spading and thorough raking put the soil in the very best condition for the development of the root system.

The garden must be made fertile. Plants will not

grow in ground lacking plant food. Stable manure or a good garden fertilizer, applied at the rate of about 10 pounds to 200 square feet of ground will supply the plant food necessary for producing a good garden crop.

Good seeds are also essential for the successful garden. **Wood's Tested Seeds** have stood the test for fifty years. They are carefully bred and selected, cleaned and tested, and produce healthy plants that are true to type.

Planting may be a continuous operation from January to January. A Planters' Time Table telling when to plant and how to plant will be found on page 4 of our Golden Anniversary Catalog of Wood's Seeds. **If you have misplaced your copy or have not received this garden guide, do not start your garden without it. Mailed free on request.**
